

**NOTES:** 10 animals were assigned to each group

Estradiol cypionate [in cotton seed oil] was administered SC weekly at 3 mg/kg until the tumors grew at which point the estradiol dose was cut by 50%

Starting at Day 40, animals in various groups that had reached endpoint were removed from the study resulting in fluctuations in the growth curves at subsequent timepoints

There were three animals in the "With Matrigel" group and two animals in the "Without Matrigel" group that failed to maintain tumor growth at ~ Day 40 and therefore fluctuations in growth curves can be observed at subsequent timepoints
