

CCRF-CEM GROWTH DATA [SCID MICE] SUBCUTANEOUS XENOGRAFT

NOTES: 10 animals were assigned to each group. Animals were bilaterally implanted for subsequent tumor collection and microarray studies. To ensure standardization in data reporting, only right tumor values will be utilized for growth data associated with microarray studies. Tumors were collected from Group 3 on Day 22 post implant. —
The technician noted that the tumors were difficult to measure since tumor edges were not well defined. Necrosis was noted in one animal at passage 4 [day 28 post implant].
