

**NOTES:** 10 animals were assigned to each group.  
 Starting at Day 17, animals in various groups that had reached endpoint were removed from the study resulting in fluctuations in the growth curves at subsequent time points.  
 There was one animal in the 5X10[5] group that failed to maintain tumor growth post implant. All 10 animals in the 1x10[5] group failed to maintain tumor growth post implant.  
 Growth curves were no longer calculated when <70% remained in the group.
